

การทำระบบ login แบบ session

Php+ mysql

1. สร้าง database
 - a. สร้าง table login (username varchar 10,password varchar 10)
2. สร้าง file index.php

```
<?
session_start();

$ses_userid=$_SESSION[ses_userid];

$ses_username=$_SESSION[ses_username];

if($ses_userid <> session_id() or $ses_username == ""){

    echo 'กรุณา login

    <form action="login.php" method="post">

    username<br /><input type="text" name="username" /><br/>

    password<br /><input type="password" name="password" /><br/>

    <input type="submit" /></form>';

    } else {

    header('Location: index2.php');

    }

?>
```

3. สร้าง file login.php

```
<?
session_start();

$username=$_POST[username];

$password=$_POST[password];

$con = mysql_connect("localhost","root","1234");
```

```

$db = ses;

$result=mysql_db_query($db,"select * from login where user='$username' and pass='$password'");

$num=mysql_numrows($result);

if($num<=0) {

} else {

$_SESSION[ses_userid] = session_id();

$_SESSION[ses_username] = $username;

}

header('Location: index.php');

?>

```

3. สร้าง file index2.php

```

<?

session_start();

$ses_userid=$_SESSION[ses_userid];

$ses_username=$_SESSION[ses_username];

if($ses_userid <> session_id() or $ses_username == ""){

header('Location: index.php');

} else {

echo "คุณคือ $ses_userid $ses_username";

echo "<a href=\"logout.php\"> log out </a>";

}

?>

```

4. สร้าง file logout.php

```

<?

session_start();

```

```
session_destroy();
```

```
header('Location: index.php');
```

```
?>
```
